Read the *Data Integration Release Notes* to learn about known limitations and third-party limitations for Data Integration. For limitations regarding a connector, see the connector release notes.

For information about new features and enhancements, see *What's New*.

Fixed issues

The tables in this section describe recent fixed issues for Informatica Intelligent Cloud Services℠ Data Integration. Note that some releases might not include fixes.

July 2024 fixed issues

Issue	Description
CBDM-32640	Validation fails for an expression parameter in a dynamic mapping task when all the following conditions are true: - The expression includes a user-defined function. - A mapping in advanced mode uses the expression.
CLDDI-31444	When you parameterize the lookup expression for an unconnected Lookup transformation in a mapping in SQL ELT mode, and the expression passes an integer or decimal value, the mapping task displays a validation error saying that the argument data types aren't valid.
ISD-5308	When you run a mapping with a Structure Parser transformation that uses an intelligent structure model based on a Cobol copybook, the output is incorrect if the mapping processes a DAT file.
POP-50490	Tag names can't include control characters or certain special characters. However, when you create a tag, no warning is displayed when the tag name contains a control character or the following special characters: ? ' | { } " ^ & [ ] /

May 2024 fixed issues

Issue	Description
ISD-5321	When you use an intelligent structure model based on a Cobol copybook in a Structure Parser transformation, the output file is invalid if the transformation processes file types other than binary files.
TF-4652	The **My Jobs** page in Data Integration and the **All Jobs** and **Running Jobs** pages in Monitor display the taskflow start time and end time values based on the time zone setting in the user profile. However, when you open a taskflow instance, the values in the **Start time** and **End time** fields appear in Coordinated Universal Time (UTC) regardless of the time zone setting in the user profile.

April 2024 fixed issues

Issue	Description
CLDDI-28803	If you parameterize an expression in a mapping in advanced mode and specify a function in the mapping task that isn't available in advanced mode, the mapping task incorrectly validates the expression. If you run the mapping task, the job fails.
CLDDI-27662	Mapping tasks fail at run time when all the following conditions apply: - The task is based on a mapping in SQL ELT mode. - The source and target connections and objects are parameterized. - In the mapping task, the source type is set to "Query," and you enter a custom query.
CLDDI-27461	Validation fails for a mapping task in which all the following conditions apply: - The task is based on a mapping in SQL ELT mode. - The source and lookup connections and objects are parameterized. - Any field names in the lookup condition are identical to each other or to a source field name.
CLDDI-26612	When you run a mapping task that is based on a mapping in SQL ELT mode, the job details page displays the target name in the individual source and target results as "Target (Target1)" instead of including the actual target name inside the parentheses. If there are multiple targets in the mapping, the success rows and error rows displayed for "Target (Target1)" are cumulative for all targets.

February 2024 fixed issues

Issue	Description
CLDDI-14201	When you create a mapping task using the new mapping task editor, you can't create an advanced relationship for the parameterized source objects.
TF-2304	When a taskflow that contains multiple parallel tasks is configured to send an email on suspension, an email is sent for each failed or suspended task. This results in multiple email notifications to the recipients.

Known issues

The tables in this section describe known issues for Informatica Intelligent Cloud Services℠ Data Integration. Not all monthly releases include known issues.

July 2024 known issues

Issue	Description
ISD-5516	When you parse a PDF document that contains tables created in Microsoft Excel, Intelligent Structure Discovery doesn't detect the data correctly.
ISD-5515	When you parse a PDF document that contains multiple tables, Intelligent Structure Discovery inaccurately detects some tables as blob content.
ISD-5498	When you use an intelligent structure model in a Structure Parser transformation to read a PDF document, even though the mapping correctly writes to the target, the session log displays the following error: `[ERROR] May 02, 2024 4:10:01 PM org.apache.fontbox.ttf.gsub.GlyphSubstitutionDataExtractor putNewSubstitutionEntry`

May 2024 known issues

Issue	Description
ISD-5479	When you use an intelligent structure model in a Structure Parser transformation to parse encoded format data, even though the mapping correctly writes to the target, the session log displays the following error: `[ERROR] Apr 23, 2024 10:51:33 AM org.apache.pdfbox.pdmodel.font.PDCIDFontType0 <init> WARNING: Using fallback DroidSansFallback for CID-keyed font MSung-Light`

April 2024 known issues

Issue	Description
ISD-5286	If you change the name or data type of an element in an intelligent structure model, the order of the elements in the output groups changes.

February 2024 known issues

Issue	Description
CDAM-1242	If a user has changed the columns in a data source, you must re-run catalog extraction of that data source in Metadata Command Center. Otherwise null values for all target columns can result when you run a mapping with that data source in Data Integration.
CDAM-1224	When you run a mapping in Data Integration that includes any binary or varbinary data type, the mapping fails with an error.
POP-53378	When you import assets in Data Integration, schedules aren't displayed in the **Import Assets** dialog box. However, the schedules are imported when you click **Import**.

For information about new features and enhancements, see *What's New*.

For information about supported operating systems for the Secure Agent, PODs, supported browsers, localization support, and connector support, see the Product Availability Matrix (PAM) for Informatica Intelligent Cloud Services and the Informatica Connectivity PAM on Informatica Network:

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the Informatica Intelligent Cloud Services Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.
